## 打开Person.py, 找到下图代码

```
from height import Height

class Person:

person_length_min = 0.8

person_length_max = 1.2

person_width = 0.42

person_points = 50
```

在compute\_person\_pointcloud\_attr.py的同级目录下新建一个文件夹,命名为: training\_data

## 录几组单人走的数据,放入training\_data 文件夹中

## 运行compute\_person\_pointcloud\_attr.py

compute\_person\_pointcloud\_attr.py 2020/5/22 16:12 Python File 4 KB

## 将得到的结果填入Person.py

```
person:

person_length_min = 0.601704

person_length_max = 1.051704

person_width = 0.385592

person_points = 48
```
